

ASSIGNMENT 2: BUILT-IN FUNCTIONS

1. Write a program that asks the user to enter their age in years as input (assume that the user enters a positive integer) and calculates and prints how old the user is in terms of days. Assume that there are 365 days in a year.

For example: if the user enters 22

Sample Output → You are 8030 days old

2. Write a Python program to display the current date and time.

Sample Output:

```
Current date and time  
Tuesday, 23/10/2019, 13:15:20
```

3. Write a Python program which accepts a list of comma-separated integer numbers from user and display length, sum of items in list.
4. Compose a program that writes five uniform random floats between 0 and 1, their average value, and their minimum and maximum value.
